Twins Cleaning Solution Ratio

When using the Run-Rite Twins cleaning tool for performing a fuel system service, you have to mix the cleaner with gasoline to enable the engine to run during the cleaning process.

Whether you're using the standard Run-Rite fuel treatment (bottle #1) or SLEDGEHAMMER! product, the ratio is the same:

$\frac{2}{3}$ cleaning solution (8 ounces)

$\frac{1}{3}$ gasoline (4 ounces)
