Shift-Rite Premium Transmission Fluid Safe for Most Transmissions Today

There are a number of specialized transmission fluids on the market today. GM has Dexron VI; Ford has Mercon SP, and there are many others with long, numeric designations.

In all but a very few cases, Shift-Rite Premium Synthetic Fluid has been shown to meet or exceed manufacturers' requirements for use in today's transmissions.

To be sure, always check the Shift-Rite application chart, available on line or from your CAT Products sales person.

And to improve transmission life and performance, add a bottle of Shift-Rite Platinum Universal ATF Treatment with every transmission service. Shift-Rite Platinum reduces friction, improves heat resistance, and can increase transmission life.
