Steer-Rite Fluid Safe for Use in All Systems that Use Power Steering Fluid

Steer-Rite® Power Steering Fluid can be used effectively in any power steering system that uses power steering fluid.

Steer-Rite meets these power steering fluid requirements:

- GM 9985010 Saginaw power steering systems
- GM 9965635 Wide Temperature Performance (synthetic multi-temperature)
- Chrysler MS 1672
- Chrysler MS 5931F
- Ford M2C13B-CJ
- Ford M2C128-C and D
- Acura/Honda PN 08206-9002 PE
- Audi PN G002000
- Mercedes Benz PN 00 989 8803
- Saab PN 30 09 Bog
- Subaru PN KOZ09A0080

It's also suitable for use in Honda, Acura, Audi, Mazda, Mercedes, Saab, and Subaru power steering systems that require mineral oil based fluids.

It may also be used in power steering applications where automatic transmission fluids are specified, and vehicles requiring synthetic or semisynthetic power steering fluid.

There is one exception: Never use Steer-Rite® Premium Power Steering Fluid in the combination hydraulic units that use the same fluid for the steering system and the brake system.

For vehicles requiring hydraulic fluid or synthetic hydraulic fluid (Pentosin CHF 7.1 or CHF 11S) use Steer-Rite 6058 kits or 6005S.

Check the vehicle manufacturer specifications for fluid type prior to performing a power steering fluid service.
