

Change the engine oil without raising the car!

The new Run-Rite® Engine Oil Evacuator #9898 will change the way you change engine oil forever.

No more raising the vehicle off the ground and working from underneath.

No more time consuming removal of skid plates to access the drain plug, no more stripped drain plugs.

No more hot oil running down your arm, and no more burnt hands.

The new oil evacuator draws the engine oil out through the dipstick tube, so you can drain the crankcase from under the hood.

And the evacuator works on regular shop air pressure to create a vacuum that draws out the old engine oil, and to pressure the tool's waste tank to push the waste oil out into your shop's waste oil storage tank.

It's fast, it's easy, and it's clean. Change the engine oil the easy way with Run-Rite's new Oil Evacuator #9898.
