

GDI Fuel System Cleaning Kit #1077

Offer a solution to your customer deposit problems

- Removes Deposits and Soot Build Up from Valves, Injectors, and Combustion Chambers
- Helps Improve Performance & Fuel Economy
- Improves Idle
- Reduces Emissions
- Helps Keep Precision Oil Passages Clean
- Helps Neutralize acidic combustion and oxidation by-products
- Concentrated Professional Strength Formula
- Designed for GDI & PFI Fuel Systems
- Compatible with Ethanol Fuels
- Compatible with all engine oils
- Safe for Turbos and Intercoolers

Run-Rite GDI Fuel System kit is specifically designed to clean injectors, valves and combustion chambers in precise fuel injection systems. It contains an advanced additive package that will control the unique deposit forming tendencies of gasoline direct injection engines as well as deposits in port injection systems. Run-Rite GDI Kit exceeds the performance requirements of all industry tests including GDI (direct injector clean up), IVD (intake valve deposit clean up), PFI (port injector clean up), CCD (combustion chamber deposit control), and LTFT (long term fuel trim) tests.
